

Special OPOA Board Meeting of 9 October 2014

Lapham's came out to the dam on October 9, 2014 and surveyed the water levels and the water control structure and it was determined to be 8 inches higher than the dam permit called for it to be.

There was a special meeting call at that time by President Dave VandenBussche with Steve Dietz, Dave Washburn, Steve Sprague and Janet Hanner in attendance.

A motion was made by Dave V. and seconded by Dave W. To remove an 8 inch stop log and to remove an additional 3 inches of concrete from the overflow portion of the water control structure in order to fully comply with the state dam permit. Motion Passed.

It was also discussed that Dave V. would contact Pete's Construction and arrange for said adjustments to be made to the water control structure.

Respectively submitted

Dave Washburn
